What is the role of RealCGR® in respect of the Belgian Pavilion ?

Many thousands of people will visit the Belgian Pavilion and see for themselves what Belgian "art de vivre", technology and society have to offer. For many reasons we were eager to contribute to the resilience of the Belgian Pavilion. First, it is a matter of ensuring the safety of all people taking part, be it visitors, businesspeople, employees, …

BEL EXPO
Belgian Commission General for International Exhibitions
DUBAI

OFFICIAL PARTNER

We must also ensure the aspect of processing of personal data. The Pavilion has chosen to handle this aspect in full compliance with Belgian, European and international laws and hence guarantees the highest standards in handling all stakeholders' personal data.

BelExpo has chosen **RealBCP®** (for building resilience and reacting in case of crisis), **RealCRC®** (for smart notification and alerting) and **RealDPG®** (for managing Data Protection Compliance in accordance with EU-GDPR and more national data protection laws).

RealCGR® stands for Compliance, Governance and Risk Management.

We, as RealCGR®, provide advisory and implementation services in the domains of corporate resilience, crisis communication, personal data protection, information security, third party cyber risk management and enterprise risk management. We see it as our mission to contribute to a safer business world.

REALCGR®
trusted governance solutions

ORACLE

Join us in this magnificent event !

We want to contribute to the awareness of risk management in general. Therefore, we will share all our experience by contributing to this world-class event.

But there is more. We want to step off the well-trodden paths of risk management by showing our interest and ability to operate in the context of re-invented cities and resilient cities.

RealCGR®, together with our partner Oracle will show the newest concepts using a magnificent scale-model of Dubai City. Virtual and augmented reality and IoT will create a next-level experience.

The topics are particularly contemporary, social and important as 70% of the world's population lives in cities or urbanized areas. Join us in the world that gives a view on how smart communications can be. See for yourself how "smart-glasses" help interacting with data at any moment. Consider how "smart health care" can and will help us, or experience how smart alerting can ensure effective corporate response crises.

Quote from the Operations Manager,
Kingdom of Belgium Pavilion Expo 2020 Dubai

RealCGR® is (would be?) certainly an asset to the other pavilions. It helps to identify critical processes and their impact on the achievement of organisational objectives.

In the domain of risk and crisis management, this has traditionally been a tangle of spreadsheets, templates and checklists. **RealBCP®** therefore helps to bundle all of this into a practical and usable format that easily fulfils all the requirements of Expo in this regard.

RealCGR contributes to the Pavilion's efforts in the fields of security, risk and resilience in order to ensure and sustain the run-up towards obtaining the operational preparedness certification from the authorities.

RealBCP® is an integrated business continuity management system (BCMS) that enables resilience and a crisis readiness lifecycle.

- Integrated continuity intelligence
- Crisis-specific response system
- Risk assessment and B.I.A. module
- Business alignment features
- 3-level testing & prevention module
- Guidance and instructions
- Document storage

RealDPG® is an integrated data protection management system (DPMS) that enables full EU-GDPR compliance.

- Methodical data protection compliance
- Integrated data protection intelligence
- Preparedness and compliance proofing
- Rights and freedoms case logging
- Breach management case logging
- Technical and organisational measures
- Document storage
